

Module 3: Ideation Phase

Empathize & Discover

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Empathy Map Diagram

What does he THINK AND FEEL? • Manual Excel mapping takes too much time and creates errors. • Automated Transform Maps and staging tables will streamline operations. • Real-time reporting on ServiceNow gives leadership vital visibility.		
What does he HEAR? • Leaders asking for accurate, centralized employee records. • Service desk staff complaining about duplicate user accounts. • System auditors emphasizing security and data compliance.	[USER]	What does he SEE? • Disconnected static spreadsheets scattered across teams. • Repeated data validation failures during import jobs. • Management requesting real-time status dashboards.
What does he SAY AND DO? • Configures ServiceNow import sets, staging tables, and Transform Maps. • Validates demographic fields before committing records to target tables. • Advocates for workflow automation to replace manual data uploads.		

Pain	Gain
• Frequent record duplicates and missing fields from manual import. • Unmapped target fields and unhandled exceptions halting import jobs. • Lack of real-time visibility for HR leadership and service desk managers.	• Seamless automated Excel data ingestion via ServiceNow Transform Maps. • Real-time interactive dashboards for employee demographics and status. • Drastically reduced manual data entry workload and zero duplicate records.
