

1. BRAINSTORMING & IDEATION PHASE

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement

Managing employee data in spreadsheets and transferring it manually into ServiceNow can be time-consuming and may result in duplicate or inaccurate records.

How Might We?

How might we efficiently import employee data from an Excel spreadsheet into ServiceNow while maintaining accurate and non-duplicate employee records?

Initial Discussion

The team discussed different ways to import employee information into ServiceNow and maintain the records accurately. The main requirements identified were importing spreadsheet data, mapping the data correctly, preventing duplicate records, and making the information easy to view.

Figure 1: Employee Data Spreadsheet - Sample

Employee ID	Employee Name	Email	Department	Location
E001	Arun Kumar	arun@example.com	IT	Chennai
E002	Priya Sharma	priya@example.com	HR	Bengaluru
E003	Rahul Das	rahul@example.com	Finance	Chennai
E004	Meena Joseph	meena@example.com	IT	Coimbatore

Step 2: Brainstorm, Idea Listing, Grouping

The team generated different ideas to solve the identified problem. The ideas were grouped based on the main activities required for employee data management and prioritized according to project impact and feasibility.

Detailed Ideas

- Import employee data from an Excel spreadsheet into ServiceNow.
- Use Import Sets to temporarily store the imported data.
- Use Transform Maps to transfer the data to the Employee Test table.
- Use Coalesce with Employee ID to prevent duplicate records.
- Create reports based on Department and Location.
- Create a dashboard to display employee information.

Figure 2: Brainstorming and grouping of ideas.

Step 3: Idea Prioritization

Brainstormed Ideas & Prioritization

Category / Idea	Importance	Feasibility	Priority
Import employee data using Import Sets	High	High	1
Map data using Transform Maps	High	High	2

Use Coalesce with Employee ID to prevent duplicate records	High	High	3
Create reports and dashboard	Medium	High	4

Selected Idea

Develop an Employee Data Management System using ServiceNow Import Sets and Transform Maps to import employee data from Excel, prevent duplicate records using Coalesce, and display employee information through reports and dashboards.
