

Import Data Using Transform Maps (Spreadsheet)

Project Testing Phase

The data import process was tested in ServiceNow using a spreadsheet and a Transform Map. The spreadsheet data was loaded into ServiceNow, source fields were mapped to the corresponding target fields, and the transformation was executed. The resulting records were then verified in the target table.

1. Prepare the Spreadsheet

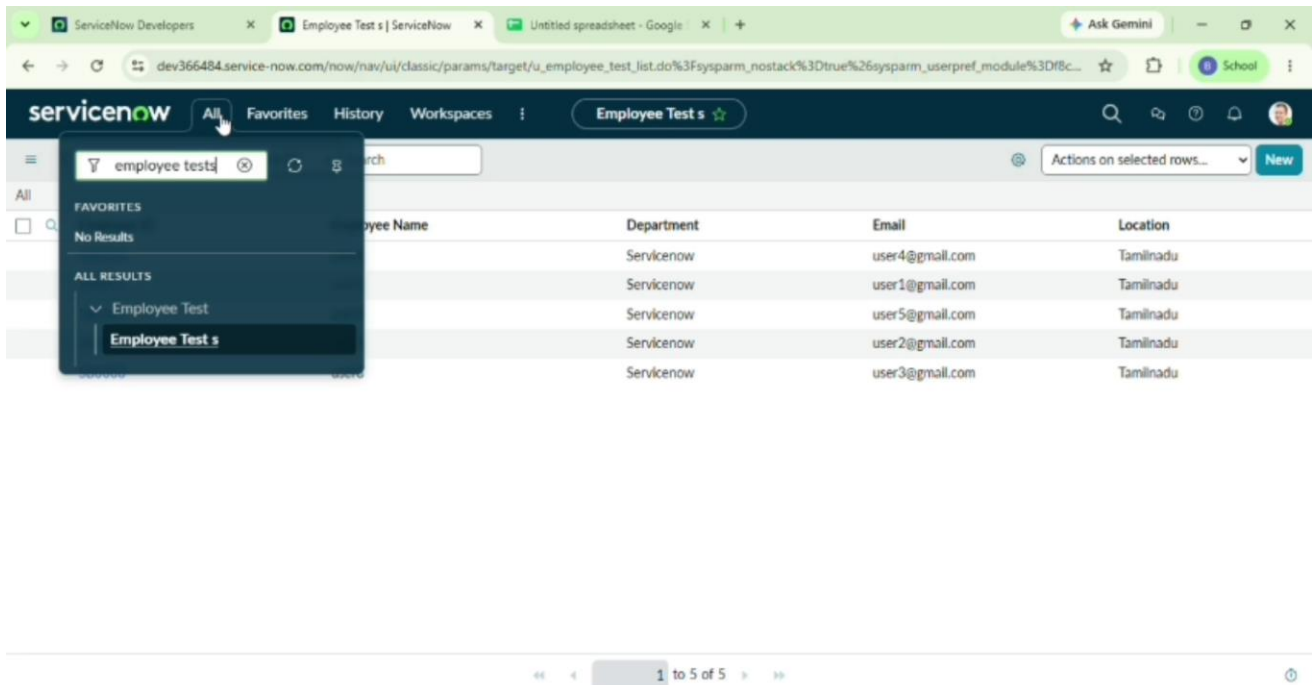

The employee data was prepared in a spreadsheet with the required fields and records. The spreadsheet was used as the source for the ServiceNow data import process.

ID	Name	Email	Department	Location
1	user1	user1@gmail.co	Servicenow	Tamilnadu
2	user2	user2@gmail.co	Servicenow	Tamilnadu
4	user3	user3@gmail.co	Servicenow	Tamilnadu
5	user4	user4@gmail.co	Servicenow	Tamilnadu
6	user5	user5@gmail.co	Servicenow	Tamilnadu

Screenshot – Prepare the Spreadsheet

2. Load the Spreadsheet into ServiceNow

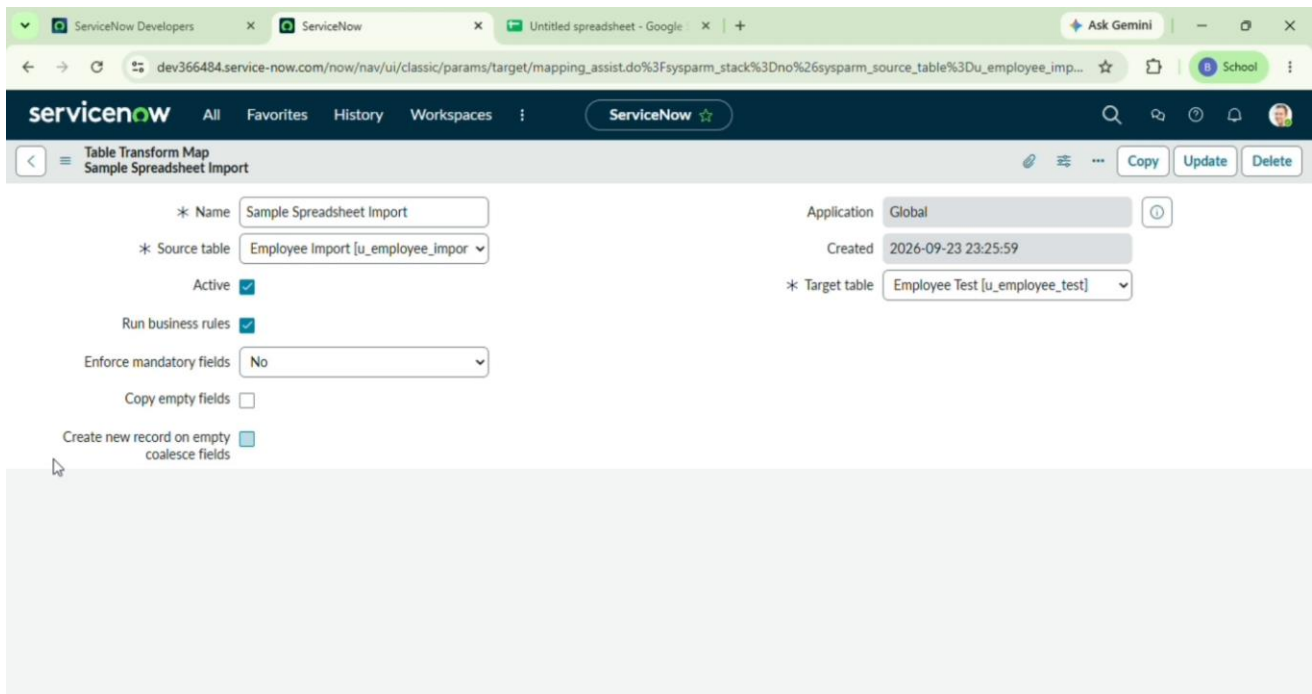

The spreadsheet was uploaded into ServiceNow through the import process. ServiceNow created/used the import-set data as the source for the transformation.

Screenshot – Load the Spreadsheet into ServiceNow

3. Configure the Transform Map

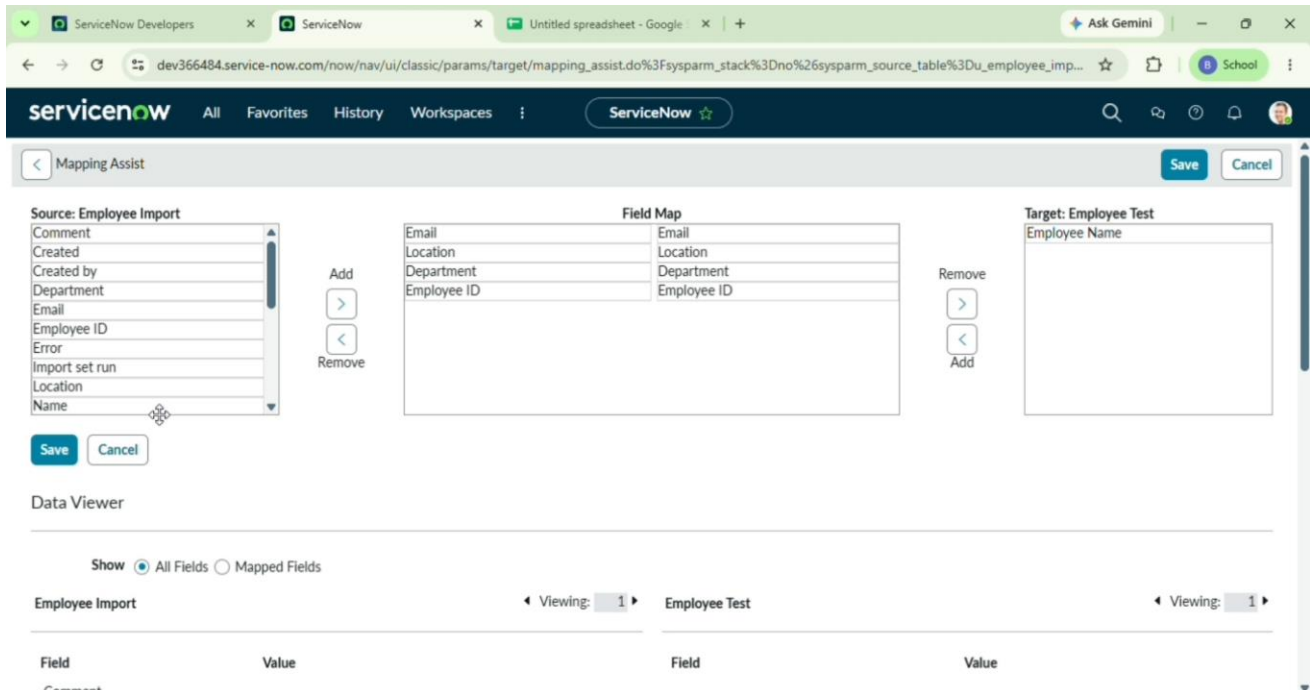

A Transform Map was configured to transfer data from the imported source table to the required target table. The source and target tables were selected for the transformation.

Screenshot – Configure the Transform Map

4. Map the Fields

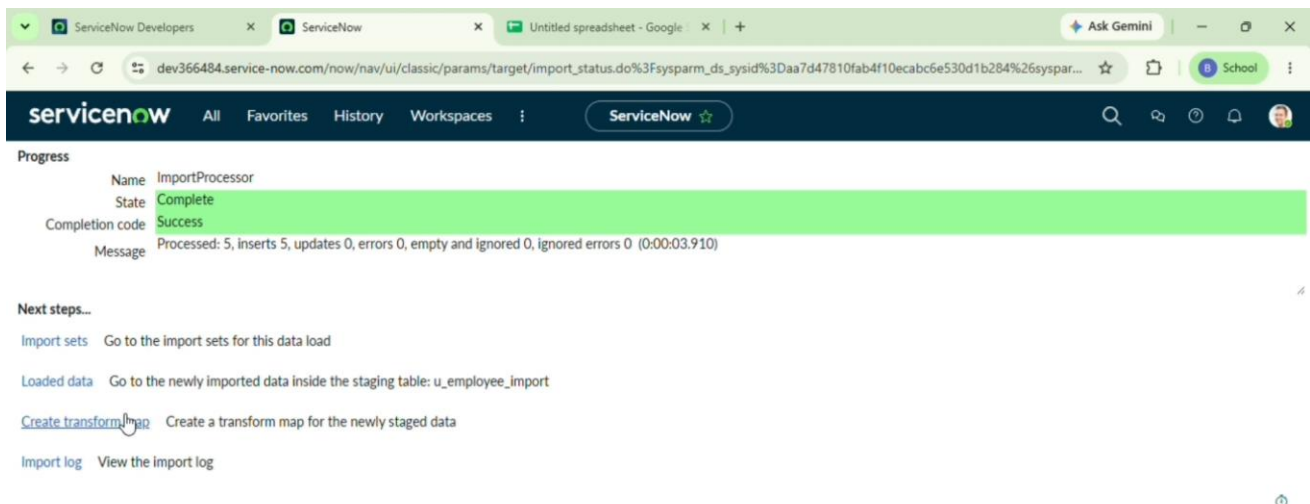

The source fields from the imported spreadsheet were mapped to the corresponding fields in the target table. This ensured that each value was transferred to the correct field.

Screenshot – Map the Fields

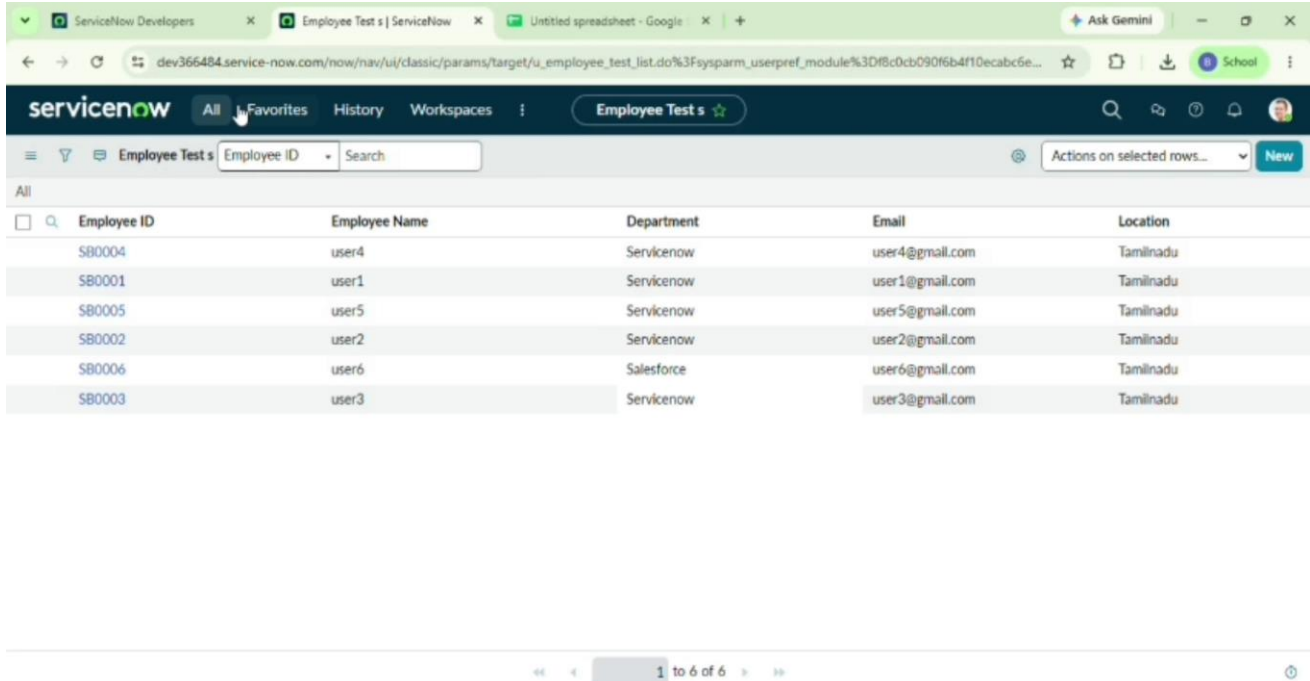

5. Execute the Transformation

The Transform Map was run to transform the imported spreadsheet data and create/update records in the target table.

6. Verify the Imported Records

The target records were checked after the transformation. The imported employee information was displayed in the target table, confirming that the data was transferred successfully.

The screenshot shows the ServiceNow interface with a table titled 'Employee Test s'. The table contains six rows of employee data. The columns are Employee ID, Employee Name, Department, Email, and Location. The data is as follows:

Employee ID	Employee Name	Department	Email	Location
S80004	user4	ServiceNow	user4@gmail.com	Tamilnadu
S80001	user1	ServiceNow	user1@gmail.com	Tamilnadu
S80005	user5	ServiceNow	user5@gmail.com	Tamilnadu
S80002	user2	ServiceNow	user2@gmail.com	Tamilnadu
S80006	user6	Salesforce	user6@gmail.com	Tamilnadu
S80003	user3	ServiceNow	user3@gmail.com	Tamilnadu

The interface also shows a search bar for 'Employee ID' and a pagination bar at the bottom indicating '1 to 6 of 6' records.

Testing Result

Result: The spreadsheet data was successfully imported into ServiceNow using the Transform Map, and the transformed records were verified in the target table.

Status: Pass
