

Project Design Phase-II: Data Flow Diagram & User Stories

Data Flow Diagram (DFD)

DFD Level 1 - Data Import & Transformation Automation

Flow Explanation:

1. **Spreadsheet Upload:** The ServiceNow Administrator uploads the spreadsheet file (CSV/Excel) to create a Data Source.
2. **Import Set Staging:** Raw data from the file is loaded into the temporary Import Set Staging Table.
3. **Transform Map Processing:** The Transform Map maps staging columns to target fields, executing field maps, Coalesce rules, and transform scripts.
4. **Target Table Insertion/Update:** Validated data is transformed and populated into the Target Table.

5. **Logging & Error Tracking:** Execution details, error records, and skipped rows are captured in the Import Set Run Logs for verification.

User Stories

User type	Functional Requirement (FR)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Administr... ▾	Data Source Configuration	USN-1	As an admin, I can upload a spreadsheet file (CSV/XLSX) so that raw data is staged into an Import Set table.	The uploaded file successfully populates the staging table with correct column headers and row data without errors.	High ▾	Sprint 1 ▾
ServiceNow Administr... ▾	Field Mapping	USN-2	As an admin, I can map spreadsheet columns to target table fields using a Transform Map.	'Auto Map Matching Fields' maps matching names correctly, and manual field mapping allows custom column pairing.	High ▾	Sprint 1 ▾
ServiceNow Administr... ▾	Duplicate Prevention	USN-3	As an admin, I can set a Coalesce field on unique identifiers (e.g., Email or Serial Number).	Existing records matching the coalesce key are updated, and non-matching records are inserted as new rows.	High ▾	Sprint 1 ▾
ServiceNow Developer ▾	Scripted Transformation	USN-4	As a developer, I can write OnBefore / OnAfter transform scripts to convert dynamic values or handle complex logic during import.	The script runs during execution, converting formats (e.g., date formatting, choice lookup) accurately before saving to the target table.	Medium ▾	Sprint 2 ▾
ServiceNow Administr... ▾	Execution & Logging	USN-5	As an admin, I can run the transform map and view progress logs and row status.	The system displays completion status, count of inserted/updated records,	High ▾	Sprint 2 ▾

User type	Functional Requirement (FR)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
				and detailed error logs for failed rows.		
ServiceNow Administr... ▾	Testing & Validation	USN-6	As an administrator, I can verify that imported records match spreadsheet source data accurately.	Target table contains transformed data matching the source spreadsheet, with no unexpected record duplication or data loss.	High ▾	Sprint 2 ▾
