

5. PROJECT DEVELOPMENT PHASE

Project Name: Import Data using Transform Map (Spreadsheet)

Module: ServiceNow – Import Set & Transform Map

5.1 Spreadsheet Preparation

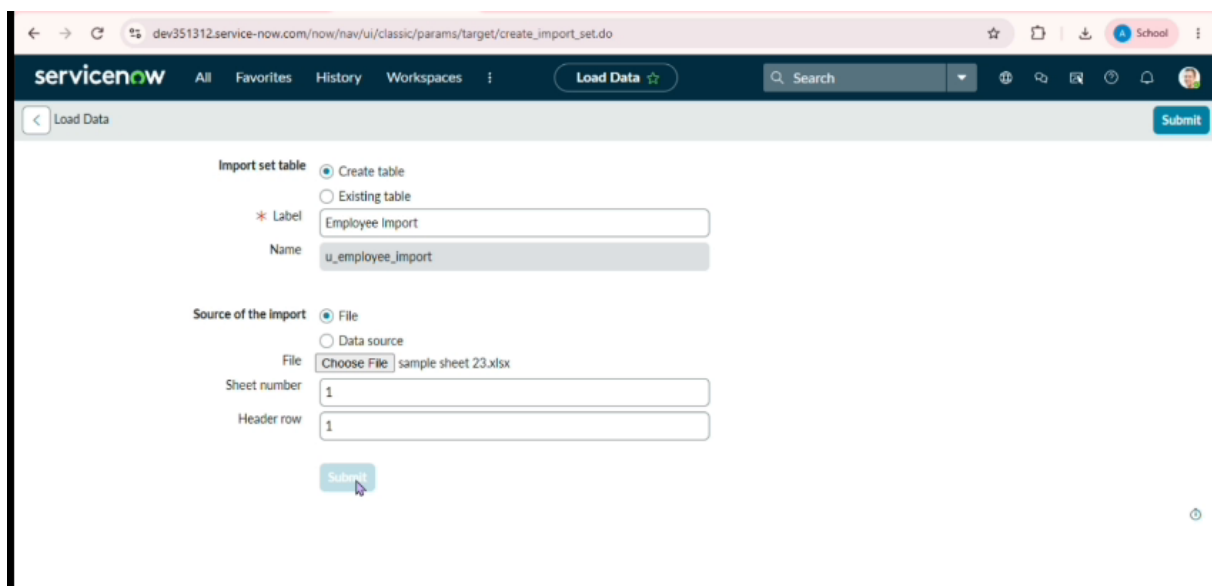

Employee data was prepared in spreadsheet format with Employee ID, Name, Department and Location.

Employee ID	Name	Email	Department	Location
SB0001	user1	user1@gmail.co	Servicenow	
SB0002	user2	user2@gmail.co	Servicenow	
SB0003	user3	user3@gmail.co	Servicenow	
SB0004	user4	user4@gmail.co	Servicenow	
SB0005	user5	user5@gmail.co		

5.2 Import Set Creation

The prepared spreadsheet was imported into ServiceNow using the Import Set feature. The source file and import table were configured for the employee data.

* Label Employee Import

Name u_employee_import

Source of the import ☒ File ☐ Data source

File Choose File sample sheet 23.xlsx

Sheet number 1

Header row 1

Submit

5.3 Transform Map Creation

A Transform Map was created to transfer the imported employee data from the import set table to the target table.

The screenshot shows the 'Table Transform Map - New Record' form in ServiceNow. The form has a header bar with 'servicenow' logo and navigation links. Below the header, there's a breadcrumb trail and a search bar. The main form area contains several fields and checkboxes. A red error message at the top states: 'The following mandatory fields are not filled in: Target table'. The fields include: Name (Sample Spreadsheet Import), Source table (Employee Import [u_employee_im...]), Application (Global), Target table (None), Order (100), and Run script (unchecked). There are also checkboxes for Active, Run business rules, Enforce mandatory fields, Copy empty fields, and Create new record on empty coalesce fields. A 'Submit' button is located at the bottom left of the form.

5.4 Field Mapping

The source fields were mapped with the corresponding fields in the target table so that the employee information could be transformed correctly.

The screenshot shows the 'Mapping Assist' interface in ServiceNow. It displays a 'Field Map' section where source fields are mapped to target fields. The source table is 'Employee Import' and the target table is 'Employee Test'. The 'Field Map' table lists the following fields: Employee ID, Department, Location, Email, and Name. The 'Name' field is highlighted, and a mouse cursor is pointing at it. There are 'Add' and 'Remove' buttons for mapping fields. Below the 'Field Map' section, there is a 'Data Viewer' section with a 'Show' dropdown set to 'All Fields'. The 'Data Viewer' section shows two tables: 'Employee Import' and 'Employee Test', each with a 'Field' and 'Value' column. The 'Employee Test' table is currently empty.

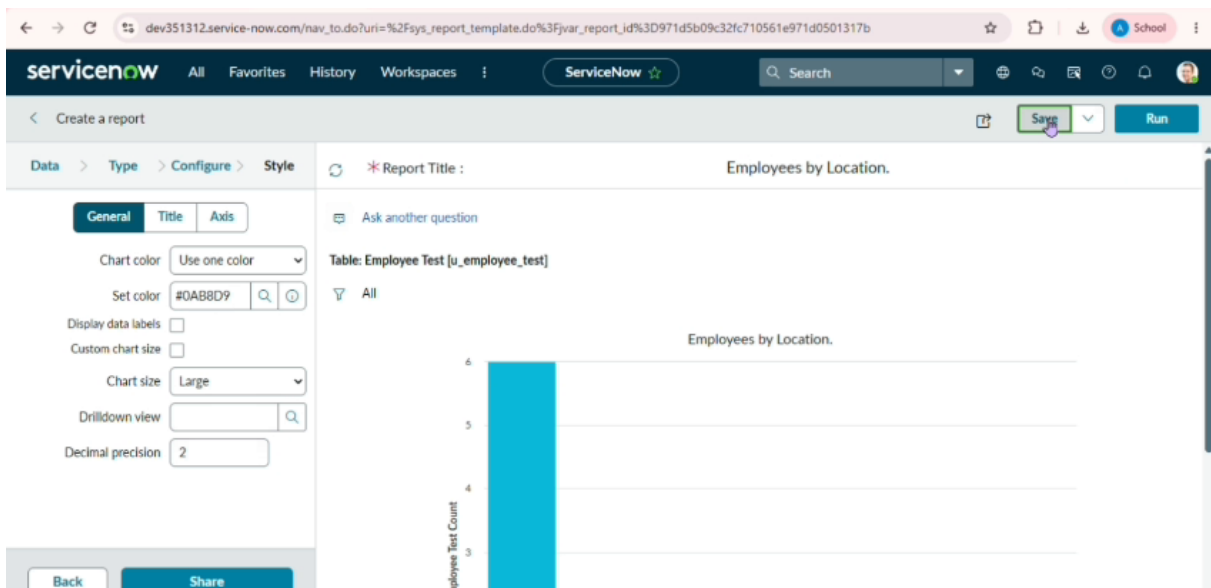

5.5 Final Output

The spreadsheet data was successfully transformed and imported into the target table. The imported employee records were verified in ServiceNow.

Department	Email	Employee ID	Employee Name	Location
Servicenow	user4@gmail.com	SB0004	user4	TamilNadu
Servicenow	user3@gmail.com	SB0003	user3	TamilNadu
Servicenow	user2@gmail.com	SB0002	user2	TamilNadu
Servicenow	user1@gmail.com	SB0001	user1	TamilNadu
Servicenow	user5@gmail.com	SB0005	user5	TamilNadu

5.6 Report Creation

Reports were created from the imported employee table to display employee information in a clear and useful format.

5.7 Dashboard Output

The reports were added to the Employee Analytics Dashboard to provide a visual summary of the employee data.
